

Kiskanu CBD Suppository FAQ

Suppositories are an excellent method of delivering CBD to the endocannabinoid system. The pelvic region is full of receptors, so this method allows the CBD to bypass the liver and quickly be absorbed directly into the bloodstream and be dispersed throughout the vascular system. We infuse organic Calendula petals into the Coconut Oil base to soothe mucous membranes and aid in muscle relaxation. As the suppository melts slowly, this allows the therapeutic qualities of CBD to be effectively absorbed into the bloodstream. As a result, suppositories are an efficient method of treating full body complaints. You may feel a difference in your disposition when using suppositories; you'll find yourself calmer, relaxed, and at ease.

INGREDIENTS? Virgin Cold-Pressed Coconut Oil, CBD derived from Hemp, Calendula. Contains Coconut.

SUGGESTED USE? Our CBD Suppositories localize where cannabinoids are active in your body. We suggest using CBD Suppositories for inflammation, menopausal discomfort, vaginal dryness, menstrual aches, bowel discomfort, pelvic discomfort, lower back and hip discomfort, soothing irritated tissues, muscle spasms, etc.

INSTRUCTIONS? Before using CBD Suppositories, chill the suppository in their bolus (white plastic case) in the freezer or fridge for at least 15 minutes. Once chilled, gently pull apart the white plastic inner packaging over a clean surface (in case it tries to get away), remove the suppository, and discard packaging. With clean hands, gently insert the suppository into the rectum or vagina 1" deep. We recommend lying down for at least 20 minutes after insertion so gravity doesn't encourage the suppository to exit before it has time to be absorbed by your body. (Rest is good!!) If you are using the suppository vaginally, a tampon can be inserted following the suppository to keep the oil inside once it begins to melt. Safe to use with menstrual cups. Natural product, color may vary. Oil based, may stain.

WHO? Every body! Recommended for all people. Can be used vaginally or rectally.

EFFECTS? You will likely feel the effects within 15-20 minutes, and they may last up to 4 hours. Wait 4 hours before inserting another suppository. Once you are comfortable with your dosage and familiar with the product, use as often as desired.

INTOXICATING? You will experience no intoxication. If you are concerned with the large dose of CBD, you can cut a suppository in half and insert half at a time. Always start with a small amount and work up to larger doses. Contains between 0-0.3% THC (in compliance with the 2018 Farm Bill).

STORAGE? Keep in a cool dark place, ideally the freezer. Keep out of direct sunlight. May last over two years (product will smell rancid when expired).

ORGANIC? Made with Broad Spectrum Hemp CBD grown in the USA. All other ingredients we use are certified organic or wild-crafted. Our CBD as well as our final products are third party laboratory tested to parts per billion for heavy metals, pesticides, mycotoxins, potency, and residual solvents.

We categorize Broad Spectrum as oil with a varied pharmacological profile extracted from the whole plant; including terpenes (essential oils), other cannabinoids (there are more than 100 known cannabinoids, with more being discovered—CBD or cannabidiol being one of them), and less than 0.3% THC (in compliance with the 2018 Farm Bill). We believe (and studies are starting to show) that using a wide spectrum of cannabinoids will enhance whole body wellness for our clients.
